

INSPIRING SOLUTIONS

FLUID LEVEL INDICATORS

The Twist2Lock™ Fluid Level Indicator design accommodates check, check/fill, or fill only applications for medium and heavy-duty engines and transmissions. The unit is manufactured as a complete system and can be customized to meet the customer's requirements.

- Fully calibrated system, not just parts
- Tier-1 solution source for the world's top OEMs
- In-house design, engineering, DVP&R
- Repeatable accuracy in checking engines & transmissions
- Design helps to eliminate oil leakage at cap & at engine block
- Locking cap helps to eliminate loose or lost sticks caused by vibration
- Over 7,000,000 units sold worldwide and growing
- One-stop shop for all your FLI needs
- More than just dipsticks, we offer a system
- Operating Temperature Standard: -40°F to +225°F
- Color options available
- Up to 2" tube bending capability
- Standard and custom blade & marking available

F1 Series

Application: Engine Oil Check

Tube Materials: Polymer or Metal
(based on temperature in routing)

Tube Sizes: 3/8", 12mm, 1/2", 15mm O.D.

Handle Options: "T" Handle

F2 Series

Application: Engine Oil & Transmission Fluid Check/Fill

Tube Materials: Polymer or Metal
(based on temperature in routing)

Tube Sizes: 1/2", 5/8", 18mm, 3/4", 1" O.D.

Handle Options: "T" Handle or Round Cap

F3 Series

Application: Engine Oil Check / Fill

Tube Materials: Metal

Tube Sizes: 1-1/2" O.D.

Handle Options: Round Cap

F4 Series

Application: Engine Oil Fill

Tube Materials: Metal

Tube Sizes: 1", 1-1/2", 1-5/8" O.D.

Handle Options: Round Cap

The PUSH2SEAL Fluid Level Indicator design accommodates check or check / fill applications for light- and medium-duty engines when the added robustness and cost of the Twist2Lock design is not warranted. The unit is manufactured as either a standalone dipstick or a complete system, and can be customized to adapt to the customer's specific requirements.
